*Estimated beyond-use date (BUD). In the absence of stability information, the USP <795> can be used as a guideline, which advises a BUD of no more than 180 days under refrigeration (2 - 8 °C) or at controlled room temperature (20 - 25 °C) for non-aqueous dosage forms (water activity below 0.6).

The BUDs were determined using an HPLC stability-indicating method. Additional information is available upon request.

APIs not included in these resources can also form elegant, stable compounded preparations that help improve patient comfort and compliance. When no study data is available for a specific API, it is recommended that the pharmacist assign an appropriate expiry date based on internal protocols, risk analyses, or guidelines from accredited pharmacopeias.
