

DiluCap™

Leitfaden für APIs von A bis Z

1. DiluCap™: Der richtige Hilfsstoff für Ihre Kapseln

Hinweis:
Wir empfehlen die Nutzung von DiluCap™ erst für Patienten ab 2 Jahren.

Nachfolgend die verschiedenen DiluCap™-Varianten und Ihre Anwendung:

DiluCap™ SLD

für Wirkstoffe der Klassen I und III des biopharmazeutischen Klassifikationssystems (Wirkstoffe mit hoher Löslichkeit in wässrigem Medium).

Beispiele:

Benzepiril, Fluoxetin und Hydroxychloroquin-Sulfat

DiluCap™ PSD

für Wirkstoffe der Klassen II und IV des biopharmazeutischen Klassifikationssystems (Wirkstoffe mit geringer Löslichkeit in wässrigem Medium).

Beispiele:

Naproxen, Furosemid und Oxcarbazepin

DiluCap™ Hygro

für Wirkstoffe mit hygroskopischen Eigenschaften (sie nehmen leicht Feuchtigkeit aus der Umwelt auf) oder zerfließenden Eigenschaften (sie haben eine große Menge Wasser in ihrem Molekül und können es in der Umwelt ausscheiden).

Beispiele:

L-Carnitin, pflanzliche Arzneimittel und Laktobazillen

DiluCap™ SR

für Wirkstoffe oder Formulierungen, die eine veränderte Freisetzung erfordern.

Beispiele:

Bupropionhydrochlorid, Pentoxifyllin und Venlafaxinhydrochlorid

DiluCap™ Antioxi

für Wirkstoffe, die oxidationsanfällig sind.

Beispiele:

Captopril, Methyldopa und Imipramin

DiluCap™ OD

für Tapioka-Kapseln, Streukapseln oder jede andere Kapsel zur sublingualen Einnahme.

Beispiele:

Coenzym Q10, 5-HTP (Hydroxytryptophan) und Melatonin
